

# DECORATIVE HARDWARE SELECTION

## A Step-By-Step Guide

### STEP 1:

#### DECIDE WHAT HARDWARE COMBINATION YOU LIKE FOR YOUR PROJECT

There are many different hardware combinations that you can choose and everyone is different. Listed below are some of the most common hardware combinations.

- Knobs on all doors and handles on all drawers
- Handles on all doors and drawers
- Handles on all doors and drawers and knobs on the small doors at the top
  - This option is only available for clients that are taking their cabinets to the ceiling on 9', 10', and 12' ceilings.
  - If the client has 8' ceilings, there will not be an extra set of cabinets above their wall cabinets
- Knobs on all doors and drawers
- Contemporary/ Modern hardware options include:
  - Edge/tab pulls
  - Touch latches (press to open) (no visible hardware)
  - Finger grooves routed into the back of the door and/or drawer fronts
  - No visible hardware on wall cabinets and edge pulls or handles on lower cabinets and pantries

*Attention: clients who choose the micro shaker door style have the option of edge pulls, touch latches, and placing a knob and or handle on the recessed panel of the door or drawer front. There is not enough room to put a handle or knob on the rails of the micro shaker door. See picture on page (4) for reference.*

### STEP 2:

#### CHOOSE WHAT FINISH YOU WANT ON THE HARDWARE

- A lot of clients want the finish on their hardware to match the plumbing/light fixture finish they select and some clients mix it up and choose a different finish.
  - This is completely up to the individual and both options look good

### STEP 3:

#### GO TO ONE OF THE LINKS BELOW AND CHOOSE A HARDWARE STYLE FOR YOUR PROJECT

- Make sure that the hardware style you select comes in the finish that you prefer
- We will need the name of the hardware and the finish you want for each room
- Most of our clients prefer us to size the hardware for them; we use a formula to size the hardware by.
